

CERTIFIED TECHNICIAN TRAINING | CRITICAL CONTROLS

The Price Critical Controls Certified Technician Training curriculum was created to allow experienced controls/electronics professionals to develop a comprehensive understanding of the Price Critical Controls laboratory and healthcare controls solutions. The four and a half day hands-on program covers all the key aspects of the Price Critical Controls offering and prepares attendees for the responsibilities of project start-up, commissioning, troubleshooting and owner training, among others. By developing an expertise in the Price Critical Controls product and solution offering, Price Certified Technicians will provide facility owners with the confidence that local controls support instills.

TRAINING FOCUS

- Product and Applications Overview
- Installation Requirements
- Specifications Review
- Wiring
- Programming
- Networking
- Webserver
- Test and Balance
- Troubleshooting
